

**SLX Side Door Elevators** are used to hoist casing and drill collars. They should only be used with tubulars having square-shoulder connections or lifting plugs.

The elevator features a simple, reliable door, latch, and safety latch that lock simultaneously when the door is closed. The shielded safety latch protects the mechanism from accidental opening.

To open, simply pull the safety pin, pull the latch handle outward, and swing the elevator halves apart. Both latches are operated by a single handle and automatically re-latch when the elevator door is closed. The lifting ears are strategically placed to prevent picking up the tubular with the elevator inverted.

**SLX Side Door Elevators** are designed for all sizes of casing up to 30 in., with load ratings ranging from 150 tons to 350 tons.

SLX ELEVATORS	
4-1/2" - 20"	150 Ton
4-1/2" - 30"	250 Ton
6-5/8" - 14"	350 Ton
